Email : yus059@ucsd.edu
Mobile : (+1) 858-405-5016
Address: La Jolla, CA

EDUCATION

- University of California, San Diego (UCSD)** La Jolla, CA
Doctor of Philosophy in Electrical and Computer Engineering
Co-advised by Prof. Tyler Seibert and Prof. Truong Nguyen
Sep 2023 - Present
- University of California, San Diego (UCSD)** La Jolla, CA
Master of Science in Electrical and Computer Engineering
GPA: 3.82/4.0
Sep 2021 - June 2023
Courses: Statistical Learning (A), Information Theory (A), Digital Image Processing (A), Linear Algebra and Application (A+), Prob & Stats for Data Science (A), Prin of Medical Imaging (A), Filter Banks and Wavelets (A)
- Zhejiang University (ZJU)** China
Bachelor of Science in Information and Engineering
Overall GPA: 3.68/4.0; Last 60 GPA: 3.80/4.0
Sep 2017 - Jun 2021
Courses: Signals and Systems (94/100), Digital Signal Processing (89/100), Information, Control & Computing (86/100), Principles of Communications (91/100), Artificial Intelligence (92/100)

RESEARCH EXPERIENCE

- Bird's-Eye View (BEV) Perception with Monocular Images** Jun 2022 - Nov 2022
A summer research internship project advised by Prof. Nuno Vasconcelos Statistical Visual Computing Lab, UCSD
 - Conducted thorough reviews on state-of-the-art methods in monocular 3D/BEV object detection:** Categorized prior works into representation transformation, 2D detection, and 3D proposal generation based methods.
 - Developed a novel dual-branch Transformer architecture for cross-view perception:** Leveraged key points (e.g. head and feet locations for pedestrians) in image view to guide the perception in the bird's-eye view.
 - Implemented the training framework and conducted extensive experiments:** Conducted experiments on different variants of the network with the widely adopted KITTI3D dataset and analyzed their performance.
- Space-Time Adaptive Processing (STAP) with Coprime Arrays and Samplers** May 2020 - Mar 2021
A research project led by Prof. Chengwei Zhou Zhejiang University
 - Developed a STAP algorithm with coprime arrays and coprime samplers that can achieve competitive performance with less array elements and less sampling rates:**
 - Realized the joint angle-doppler estimation algorithm with coprime arrays and coprime samplers with MATLAB.
 - Studied several beam-forming algorithms in the literature and realized these algorithms with MATLAB implementations.
- COVID-19 Computational Challenge co-hosted by Los Angeles City and RMDS Lab** May 2020 - Jun 2020
A competition cooperated with University of Michigan and guided by Prof. L. Jay Guo University of Michigan
 - Developed a machine learning algorithm to analyze the efficiency of the policies about the COVID-19:**
 - Leveraged Long Short Term Memory (LSTM) and linear regression models.
 - Collected and cleaned the daily Covid-19 cases data of various areas in Los Angeles.
 - Used R-shiny to create a website to demonstrate the visualization of our results.

ACADEMIC PROJECTS

- Covid-19 Classification Based on Deformable Convolution** May 2020 - June 2020
A course project of Artificial Intelligence Zhejiang University
 - Developed a deep learning method to identify the COVID-19 and community-acquired pneumonia:**
 - Summarized several state-of-the-art methods on COVID-19 image classification like Covid-net and Covid-next
 - Applied deformable convolution in the algorithm to enhance the transformation modeling capacity of CNN

HONORS AND AWARDS

- The Third Prize University Scholarship (Top 15%) 2019 - 2020
- Model Student of Academic Records (Top 25%) 2019 - 2020

SKILLS

- Languages:** Chinese (Native), English (TOEFL: 106(S 24), GRE: 324+3.5)
- Programming and simulation:** Python (fluent), C/C++ (proficient), MATLAB (fluent), Verilog (prior experience), R (prior experience), ADS (prior experience)
- Machine Learning:** Pytorch, OpenCV
- Data Science:** NumPy, Pandas, Scipy, Matplotlib
